#### 1994 ANNUAL REPORT INDIANA PUBLIC TRANSIT

State of Indiana

Evan Bayh, Governor Frank O'Bannon, Lt. Governor Stan Smith, Commissioner

July, 1995

Indiana Department of Transportation Public Transit Section 100 North Senate, Room N901 Indianapolis, Indiana 46204

This document is disseminated under the sponsorship of the United States Department of Transportation in the interest of information exchange. The United States Government assumes no liability for the contents or use thereof. The opinions, findings, and conclusions expressed in this publication are those of the Indiana Department of Transportation. The preparation of this publication has been financed in part through grants from the United States Department of Transportation, under the provisions of Sections 8 and 18 of the Federal Transit Act, contract numbers IN-80-2002 & IN-18-6009. The United States Government does not endorse products or manufacturers. Manufacturers' names appear herein solely because they are considered essential to the objective of this report.

#### **Executive Summary**

#### Ridership

Indiana's transit systems provided over 27.7 million passenger-trips during 1994, an increase of 1.5% from 1993 ridership.

Twenty-two of Indiana's 38 transit systems reported carrying more passengers than in the previous year. Group 1 Large Fixed Routes and Group 4 Demand Response and County-Wide Service were the two groups that posted increases. With the largest percentage gains coming from Madison County 39.55%, Huntingburg 18.64%, and Kosciusko County 17%. Indianapolis posted the largest increase in passenger trips with 232,390 more trips than the previous year. As in 1993, Group 2 Medium Fixed Route systems experienced the largest ridership decrease in 1994 at -7.68%. The largest individual decreases in passenger trips are marked by Terre Haute at -35.82% (107,621 passenger trips), and East Chicago at -38.45% (51,647 passenger trips). Generally, the reasons for these types of decreases include fare increases, service cuts, and reductions in funding availability at the local level.

#### Service Supplied

Transit passenger vehicles traveled 24 million miles in 1994, about one million miles less than in 1993. This is especially notable considering the statewide ridership increase. Based on the system groupings, only group 4 systems showed an increase in total miles of service (0.31%). This is not surprising considering the fact that group 4 posted the highest increase in passenger trips, and maintains the highest average trip length. Overall, 20 systems reported a decrease of service miles in 1994, almost the same number of systems that reported ridership increases.

Statewide, a total of 1,259 vehicles were operated in 1994, reflecting a decrease of 39 vehicles since 1993. Miles operated per active vehicle declined slightly to 19,168.

In 1975, the Indiana General Assembly passed legislation which created the state's transit assistance program. That year 2,150,811 people, or 41.4% of the state's population, had public transportation available to them. In the 19 years since the General Assembly passed this legislation, the number of areas served by public transportation has increased substantially. As of 1994, 50% more people are served by public transportation in the State of Indiana. Not including duplicated service areas within the state (e.g. Northwest Indiana), 3,232,466 people, or 58% of the state's population currently have access to public transit services.

#### Revenues

Total fare revenue collection increased in 1994 to \$24.8 million from \$23.6 million in 1993. The statewide farebox recovery percentage, which illustrates the extent to which total operating expenses are covered by fare paying passengers, increased by 1% to 28% in 1994. Group 1 systems, including NICTD, covered 34% of expenses with fare revenues, while Group 2 covered 15%, Group 3 covered 11% and Group 4 covered 21%.

Gross operating revenues, which includes revenue from all sources, increased slightly to over \$87.8 million in 1994 from \$87.7 million in 1993.

#### **Expenses**

Public transportation expenses were \$87.8 million statewide in 1994, a minimal increase from \$87.7 million from the previous year. However, group 1 systems reflected a cost decrease from 1993 expenditures.

Reflecting the labor-intensive nature of the transit industry, labor and fringe benefits again accounted for the majority of expenditures at 66%, up slightly from 64% the year before. The cost per total vehicle mile was \$2.79 in 1994, compared to \$2.63 in 1993.

#### INTRODUCTION

The Indiana Department of Transportation (INDOT) deems public transit to be an essential service which supports local and state goals for economic growth, quality of life, energy conservation, and environmental quality.

The Public Transit Section of INDOT provides financial and technical assistance to public transit systems throughout the state. The primary goal of the section is to furnish reliable, safe, and efficient public transit services and enhance personal mobility throughout Indiana's urban and rural areas.

This 1994 Annual Report prepared by the Public Transit Section summarizes key operating and financial characteristics of Indiana's 38 publicly-assisted transit systems. It provides information to public officials, planners, transit managers, and other interested persons.

This nineteenth annual report provides an overview of the status of transit between January 1 and December 31, 1994. The document provides the reader with a summary of transit service and financial information, a detailed report of system characteristics, a summary of 1994 federal and state transportation assistance programs and awards, and a glossary of terms as used in this report.

INDOT obtained this information from locally prepared quarterly and annual reports. In some cases, INDOT modified financial data in order to make it consistent with our report format. In all cases, we have attempted to validate the data.

In 1986 transit operators were placed into four separate groups, based on service delivery type and other characteristics. These groupings are used to analyze and compare the financial and operating characteristics of similar transit systems.

Economy

Public transportation performs a key role in the financial well-being of Indiana. Nearly 80,000 trips are provided each day to Indiana residents who utilize public transit services for work, medical, shopping, or personal business travel. In many instances, public transit furnishes a vital link between jobs and the labor market. In fact, for many low income or transportation-disadvantaged citizens, public transit is the only access to employment opportunities.

The availability of public transportation services also promotes more efficient and livable patterns of land-use development and increases local tax bases. The presence of transit services can affect residents' choices of neighborhoods, the number of cars they purchase, and the value of their homes. An American Public Transportation Association study, "National Impacts of Transit Capital and Operation Expenditures on Business Revenues," estimates that a dollar invested in public transit results in a \$3.00 to \$3.50 increase in business revenues.

#### **Employment**

Transit systems directly **employ 2,599** full and part-time employees statewide. In addition, there are a number of industries within the state that provide vehicles, materials, and supplies to Indiana's transit operators.

#### Energy and Environment

The primary reason for America's mounting oil consumption and inefficient energy use is our traditional habit of driving alone for nearly all of our travel needs, including commuting to work. The continuation of current trends in personal travel and energy consumption poses a serious threat to our mobility, the economy, and to national stability. Public transit is a key conservation strategy that can reduce our fuel consumption and promote our nation's energy independence. A 10% nationwide increase in transit usage would result in a savings of 135 million gallons of fuel per year.

The health and economic threats of unclean air are a growing concern for the state of Indiana as well. Our dependence on single-occupant vehicles for everyday travel needs is a primary cause of the poor air quality that can affect virtually everyone in the state. Moving more passengers per vehicle mile via public transit and other shared-ride services represents a central strategy in cleaning and maintaining our air quality. In addition, the new clean air technologies and alternative fuel options that are utilized in manufacturing transit vehicles will serve to further contribute to our clean air goals by reducing the emissions of public transit services themselves.

The American Public Transit Association estimates fuel efficiency of transit compared to the average commuter auto as follows:<sup>1</sup>

- 1 bus with 7 passengers equals 1 auto
- 1 full bus equals 6 autos
- 1 full rail car equals 15 autos

In addition, transit vehicles are more energy efficient than automobiles when passenger miles are considered.<sup>1</sup> The U.S. Department of Energy estimates the following energy consumptions rates by mode:

- Commuter rail 3,155 BTU/Passenger Mile
- Transit bus 3,415 BTU/Passenger Mile
- Automobile 3,598 BTU/Passenger Mile

It has also been shown that based on national average vehicle occupancy rates, public transit contributes less pollution to the atmosphere.

# Pollution By Mode of Travel<sup>1</sup> (measured in grams per passenger mile)

	Hydro	Carbon	Nitrogen
<u>Mode</u>	<u>carbons</u>	<u>Monoxide</u>	<u>Oxides</u>
Electric Rail	0.01	0.02	0.47
Transit Bus	0.20	3.05	1.54
Vanpool	0.36	2.42	0.38
Carpool	0.70	5.02	0.69
Automobile	2.09	15.06	2.06

#### Safety

According to the National Safety Council, public transportation is one of the safest methods of passenger travel. The average death rates from 1989 to 1991 in terms of 100 million passenger miles are illustrated in the following chart.

	Death Rate
Automobiles	1.05
Airlines	0.02
Intercity Buses	0.01
School Buses	0.02
Intercity & Communter Rail	0.05
Transit Buses	0.01
Heavy & Light Rail	Not reported

#### Mobility

Many elderly, low-income, and Indiana residents with disabilities are isolated with limited access to jobs, social services, medical, recreation, and social interaction. The quality of life for these citizens is significantly improved by the availability of public transportation services. Mobility is essential to achieve greater personal independence and economic well-

Without question, public transportation is a lifeline for many. Public transportation services provide people with a transportation alternative, as well as an economical means of travel.

Consistent with the guidelines set forth by the Americans With Disabilities Act (ADA), all Indiana transit systems must be accessible to individuals with disabilities. All new vehicles purchased for fixed-route public transportation service must be lift-equipped, and all fixed-route operators must provide complimentary paratransit services for patrons that are unable to utilize fixed-routes. All 38 of Indiana's public transportation providers should be fully compliant with ADA requirements by 1997.

State Developments The Indiana Department of Transportation (INDOT) had a Federal Section 3 grant approved in 1993 for the sum of \$8,858,446. These discretionary funds will assist 13 of the state's grantees with pre-approved capital projects in 1994 and 1995.

> During the next year, the INDOT will examine the efficiency and effectiveness of the performance-based allocation formulas managed by the Public Transit Section. This examination is on-going and looks at all factors used to determine federal small urban and rural (Section 5311) and state Public Mass Transportation Fund (PMTF) funding levels. It is hoped that those factors which may contribute to an inefficient method of distributing funds will be removed from the allocation formulas. INDOT will work closely with local agencies to develop acceptable formulas.

#### Federal **Developments**

Statewide federal operating assistance increased by 7% during 1994. This growth was the result of an increase in both urbanized area funding (Section 5307), and federal small urban and rural funding (Section 5311).

As a result of the Intermodal Surface Transportation Act of 1991 (ISTEA) and the Clean Air Act, Northwest Indiana was defined non-attainment for air quality and received \$1.83 million in Congestion Mitigation and Air Quality (CMAQ) funds for transit-related projects within the region during 1994. In addition, South Bend received \$472,000 for transit-related CMAQ projects in 1994.

During 1994, INDOT increased its efforts to attract viable intercity transportation connections. As part of this effort, INDOT solicited interest from existing small urban and rural public transit systems, and a statewide Notice of Funding Availability was published. In all, INDOT awarded

three capital, four planning/marketing, and one operating grants for a sum of \$270,797 in federal funding, and \$86,998 in State funds.

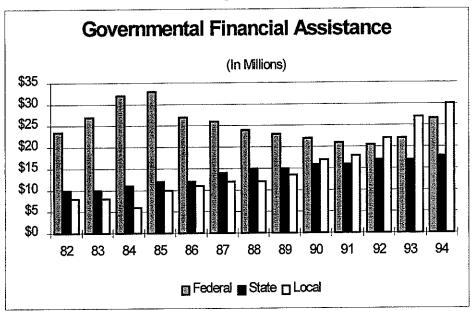

The Intermodal Surface Transportation Efficiency Act (ISTEA) requires the development and implementation of six transportation-related management systems, including a system for managing public trasnportation facilities and equipment. ISTEA also requires the output of the management systems to be utilized in the project selection process. The Public Transportation Management System (PTMS) establishes a process for the collection of data pertaining to the age, condition, useful life, and replacement value of transit facilities and equipment. This data will be utilized in the selection of the most cost-effective strategies for providing and maintaining transit assets. The intent of the PTMS is to provide for an ongoing statewide assessment of the condition of the major public transit capital assets, thus enabling the prioritization of Indiana's transit needs.

•		

#### **Funding Trends**

# State & Local Funding

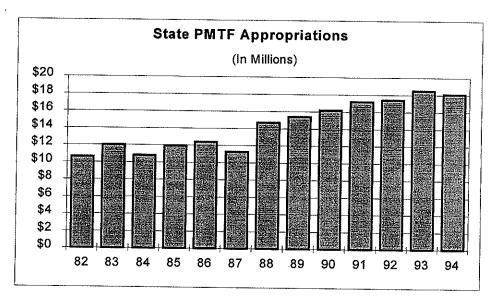

Transit (like most municipal services) must rely on property tax revenue as the primary (and usually sole) local revenue source. Under current property tax controls, levies are permitted to grow 5% per year. Because of this and the lack of other local funding options, service levels have remained constant statewide. This is evident in the Total Vehicle Miles traveled, which remained relatively the same between 1993 and 1994 (24.9 million and 24.00 million miles, respectively).

With the decline of federal transit funds, state and local funding has covered this shortfall. This trend is shown in the above graph on Governmental Financial Assistance. For the fifth consecutive year local funding has exceeded state funding and, for the third year, exceeds federal funding. In 1981, local funding financed 13% of statewide transit service. However, in 1994, local funding accounted for 25% of transit financing in Indiana. This is significant given that transit competes for scarce local dollars with other essential municipal services, including streets and roadways, police and fire protection, education, and solid waste disposal. This trend may mean that transit is becoming a more important local service. However, it is likely that transit levels will remain static because of restrictions on increases in local funding. In addition, service changes will be even more closely tied to the financial conditions at the local government level.

#### Biennial Budget and Appropriation Process

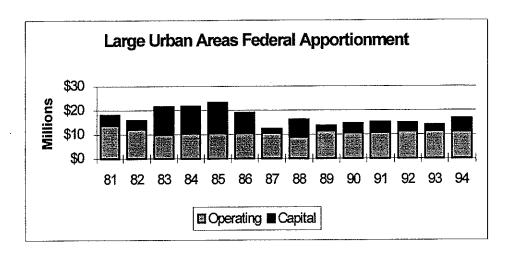

Indiana's state government functions under a biennial (two year) budget. Preparations for the two-year budget begins in the spring and summer before the long legislative session (budget session) which begins in January of every odd year (e.g. 1995) and ends in April. The statewide Public Mass Transportation Fund is appropriated at this time. Except for budget emergencies that may be addressed in the short session, all appropriation decisions are made during the long session.

The chart above reflects the growth of the Indiana Public Mass Transportation Fund (PMTF) appropriations over the last twelve years. Overall, the PMTF grew from \$10.61 million in 1982 to \$18.06 million in 1994. This represents a 70% growth in the state's total dollar investment since 1982.

Federal Section 5307 (Section 9) Block Grants - Large Urbanized Areas

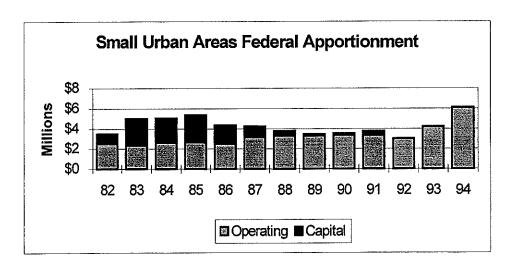

The chart on the following page reflects the funding apportioned for urbanized areas over 200,000 population, which receive their funding share based on a federal formula of population, density and certain service or performance factors. Total apportionments for the thirteen year period are over \$235 million, with over \$83 million available for capital projects and \$152 million used for operating subsidies. Overall funding in 1981 was \$18.12 million, which decreased to around \$15 million in 1994, a decrease of 17% without consideration of the affects of inflation.

Federal Section 5307 (Section 9) Block Grants - Small Urbanized Areas

The Section 5307 program provides funding to small urbanized areas (over 50,000 and less than 200,000 population) for capital and operating expenses. These funds are distributed by a federal formula that includes population and population density.

The total funds available over the most recent twelve-year period, as well as the mix of operating and capital funds, are presented in the following graph. Overall, the total funds available has increased over last year. Over the twelve-year period, \$12 million was earmarked for capital projects and \$43 million was used for operating expenses. Note that capital assistance disapated in 1992.

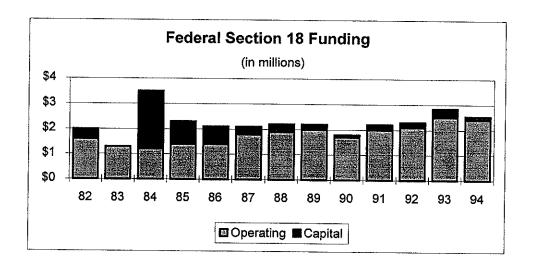

#### Section 5311 (Section 18) Financial Assistance for Other Than Urbanized

Areas

Section 5311 funds are appropriated by Congress as a percentage of the total federal Section 5307 formula assistance authorized. Indiana receives about 3% from the national appropriation.

In 1994, Indiana grantees were awarded over \$2.5 million in Section 5311 funding. This reflects a decrease of 10% under 1993 funding levels. The following chart illustrates Section 5311 funding trends during the past twelve years.

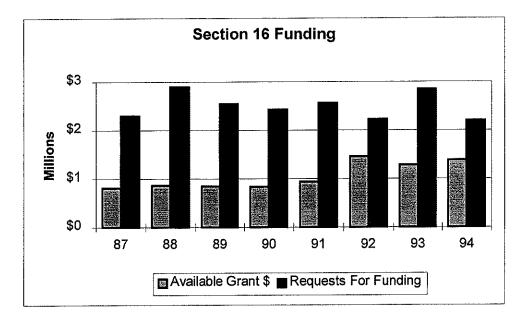

Section 5310
(Section 16)
Grants and Loans for
Special Needs of
Elderly individuals and
Individuals With
Disabilities
Th

The Section 5310 program provides capital assistance to private, non-profit social service, and public agencies, for the purchase of vans, modified vans and school buses to transport elderly and disabled people to agency sponsored programs. Indiana receives roughly \$1.2 million per year in federal assistance. The distribution is based on Indiana's share of the national elderly and disabled population.

Once inflation is taken into consideration, federal assistance has actually declined since 1987. Exacerbating this inflation-based decrease in funding is the growth in vehicle replacement backlog. INDOT receives requests to replace over 100 vehicles per year. However, due to limited funding, INDOT can only replace approximately 35 vehicles annually.

Approximately 90-95% of all funds from the Section 5310 Program are used to replace vehicles, leaving little money to fund expanded services. The following chart highlights stagnate funding levels in this program over the past eight years.

## SECTION THREE GRANTS ASSISTANCE PROGRAMS

#### **GRANT ASSISTANCE PROGRAMS**

The following is a brief description of the state and federal funding programs for public transit in Indiana.

#### **Public Mass Transportation Fund (PMTF)**

PMTF is a state fund that receives 0.76% of the state general sales and use tax. These funds are allocated on a calendar year basis using a performance-based formula. Service area population, passenger trips, total vehicle miles, and locally derived income data are utilized to compute the formula allocations. Locally Derived Income (LDI) is used to measure local financial commitment and is defined as follows:

- 1. System revenues: including fares, charter, advertising, and all other auxiliary and non-transportation revenues;
- 2. Taxes levied by, or on behalf of a transit system;
- 3. Local cash grants and reimbursements including General Fund receipts; property, local option income, license, excise, and intangibles taxes; bank building and loan funds; local bonding funds; and other locally derived assistance.

Awards are limited to an amount equal to 100% of the projects Locally Derived Income or the system's total allocation, whichever is less. 1994 PMTF awards totaling \$17,922,292 are summarized in Table 11A.

#### **Electric Rail Service Fund (ERSF)**

The ERSF is a special state fund generated from property tax on a railroad company's distributable property that provides service with a commuter transportation district established under I.C. 8-5-15. These funds are only available to commuter transportation districts that have substantially all of their service performed by electrical powered railroads. Qualifying commuter transportation districts must receive equal shares of this fund.

#### Commuter Rail Service Fund (CRSF)

The CRSF is a special state fund generated from property tax on a railroad car company's distributable property. Funds are distributed to commuter transportation districts established under I.C. 8-5-15. Funds must be used for the maintenance, improvement, and operation of commuter rail service.

#### Section 5303-Metropolitan Planning (Formerly Section 8)

These funds are granted to state and local public bodies for planning, design, engineering and evaluation of urban public transportation projects. The federal government makes funds available to the state departments of transportation and Urban Metropolitan Planning Organizations to develop transportation improvement plans and programs as well. These documents are based on local and state transportation needs. Section 5303 funding awards are illustrated in Table 11B.

#### Section 5307-Block Grants (Formerly Section 9)

This is a formula grant program for urbanized areas with populations greater than 50,000, and was authorized by the Surface Transportation Assistance Act of 1982 as a replacement for the Section 5 formula assistance program. The FTA apportions the funds according to a complex formula including population, population density, and operating characteristics.

A locality can use Section 5307 funds to offset either 80% of the net cost of a capital project, or up to 50% of the net operating deficit; however, systems are limited on how much of their annual allocation they can use for operating purposes. System awards of \$23,474,288 are summarized in Table 11A.

#### Section 5309-Discretionary Grants and Loans (Formerly Section 3)

Funding is available on a discretionary basis to urban and rural transit systems for capital improvements including the purchase of new equipment, acquisition of property, and the construction of facilities for public transportation purposes. In 1993, INDOT had a Section 3 grant approved for the sum of \$8,858,446. A statewide application was submitted in 1994 and 1995 as well.

#### Section 5310-Grants and Loans for Special Needs of Elderly Individuals and Individuals With Disabilities (Formerly Section 16)

Section 5310 furnishes capital assistance to private non-profit corporations and public bodies that deliver specialized transportation services to the elderly and persons with disabilities where mass transportation services would not otherwise be available, insufficient, or inappropriate to meet their specialized needs.

The FTA funds up to 80% of the total request for capital assistance, matched by a 20% local share. This program is administered by INDOT. During calendar year 1994, INDOT awarded \$1,391,009 in Section 5310 grants to the 41 applicants listed in Table 11C.

### Section 5311-Financial Assistance for Other Than Urbanized Areas (Formerly Section 18) This program is also administered by INDOT. During 1994, INDOT awarded \$2,537,797 in grants to 19 transit systems statewide. Section 5311 funding levels for these systems are identified in Table 11A.

Section 5311 provides capital and operating assistance to non-urbanized public transit systems. Capital grants are funded up to 80% of the total project cost, and operating grants are funded up to 50% of the net project cost (total operating cost less operating revenue).

#### Section 5311(h)-Rural Transit Technical Assistance Program (Formerly Section 18(h)

Section 5311(h) created the Rural Transit (technical) Assistance Program (RTAP) to provide technical assistance, training and research for rural and specialized transportation providers. During 1994, Indiana received \$164,459 in RTAP funds. The state's RTAP program is implemented by the Institute for Urban Transportation, with the help of an advisory committee. During the year, a three-part program was continued, which includes local technical assistance to RTAP eligible transit operators, on-site training, and a fellowship program to provide financial assistance for operators to participate in training courses.

The program also has a national element which develops information and materials for use by local operators and state departments of transportation.

#### Section 5311(i)-Intercity Operating, Capital, Planning and Marketing Assistance(Formerly Section 18(i)

The Section 5311(i) program provides funding assistance to transportation entities for the provision of intercity transportation-related services. This program was created to address the recent abandonment by intercity carriers and the special needs of isolated rural areas. Scheduled intercity bus departures have dropped dramatically statewide over the past decade or so (78%).

The Section 5311(i) program furnishes operating and capital assistance at the same levels as other FTA funded programs. In 1994, INDOT awarded \$270,797 for intercity projects.

#### Section 5313-State Planning and Research Program (Formerly Section 26A(2)

Section 5313 funds are provided to the Indiana Department of Transportation (INDOT) and fund such activities as statewide planning, technical studies and assistance, demonstration projects, management training and cooperative research.

## SECTION FOUR GLOSSARY

#### **GLOSSARY**

Body on Truck chassis (BOTC) - This vehicle seats from 12 to 18 passengers and is typically composed of a light truck chassis underneath a special body. A supplier of a BOTC will purchase a chassis and then manufacture and attach the body. This construction is similar to that of a school bus.

Charter and Other Revenue - Consists of charter service revenue, school bus service revenue, auxiliary transportation revenue, and non-transportation revenue such as leases and advertising.

Contra-Expenses - Revenue items that offset operating expenses such as income earned on working capital, cash discounts, fuel tax refunds, insurance claim payments. These revenues are not eligible as locally derived income.

**Demand Response Service** - A transportation service characterized by flexible routing and scheduling of relatively small passenger vehicles to provide door-to-door or point-to-point transportation at users demand (e.g. shared ride, taxi service).

Fare Recovery - Ratio comparing fare revenue to total operating expenses. This measure indicates how much of the operating expense is being paid for by the passenger.

**Fixed Route Service** - A system in which passenger vehicles (usually buses) follow a planned route and schedule.

Locally Derived Income (LDI) - This indicator is used to measure local financial commitment to public transit and is defined as:

- Operating revenues including fares, charter/other.
- Taxes levied by, or on behalf of a transit system.
- Local cash grants and reimbursements including general fund receipts.

Modified Van (MV) - The seating capacity of a MV is from 9 to 16 passengers. A MV is a standard van which has undergone some structural changes, usually made to increase size and particularly its height. Other body changes may include a raised or widened door and such equipment as a wheelchair lift.

Other Expenses - For purposes of the Annual Report, Other Expenses in Table 8 include the following: Taxes, purchased transportation, and miscellaneous expenses. However, for the System Pages, Other Expenses consists of only taxes and miscellaneous expenses.

Public Mass Transportation Fund (PMTF) - A state assistance fund financed by 0.76 percent of the state general sales and use tax. (See Grant Assistance Programs Section)

Purchased Transportation Expenses - Operating expenses incurred when a transit system purchases a portion of its service from another entity, (e.g., contracting with a private organization to provide specialized transit services).

Reconciling Items - Operating expenses which include interest expenses, leases and rentals for urbanized transit systems, depreciation, amortization of intangibles, purchase lease payments, related party lease agreements and other as defined in the FTA Section 15 Manual.

Revenue Vehicle Miles - The total mileage incurred in scheduled service (miles in each route multiplied by the number of times each route is run) during the report period. Excludes non-service mileage (deadhead, training, etc.), charter mileage, exclusive school service mileage, and mileage lost due to missed runs.

Road Call - A service interruption requiring assistance from someone other than the driver to continue passenger service. Road calls usually require a transfer of passengers to another vehicle to complete trip. These service the caused interruptions may be mechanical, electrical, structural, or human failures (e.g., bad brakes, flat tire, out of gas, etc.).

Route Deviation - Public Transit that operates on a fixed route from which it may deviate from time to time in response to a demand for its service or to take a passenger to a destination, after which it returns to its route and/or schedule.

School Bus (SB) - A standard school type bus seats from 22 to 44 adult passengers, and is manufactured by the body-on-chassis method. School buses used for public transportation service do not have school bus markings (yellow with black trim, etc.) and are modified for public transit use.

**Standard Van (SV)** - Standard vans have a typical seating capacity of 5 to 15 passengers. Standard vans are available from automobile manufacturers and are part of their standard production line.

Subsidy/Passenger Boarding - Ratio comparing government operating assistance (local, federal, state) to total passenger boardings. This measure is used to indicate the level of local, state, and federal assistance used in operating the transit service.

**Transit Bus** - A transit bus seats anywhere from 16 to 53 passengers and has both a body and a chassis which are designed specifically for transit use. One supplier manufactures the entire vehicle, most are equipped with diesel engines.

Small Transit Bus (STB) - Under 30'
Medium Transit Bus (MTD) - 30' to 34'
Large Transit Bus (LTB) - 35' to 40'
Trolley (TY) - Usually 30' to 35'
Articulated (ART) - Multi section highoccupancy vehicle

User Side Subsidy - A program whereby passengers receive a voucher or token that is used to purchase transportation service from a provider of the user's choice. The passenger trip is subsidized by the passenger as well as through government assistance.
